

Study in **INDIA**

With the recognition of Indian education in the international circuit, and an apparently unique assimilation of academic courses, an increasing number of foreign students have flown in from various nations to satisfy their desire for learning more. India has a pretty impressive list of universities and colleges sprawled across its major states and cities, which have inducted numerous foreign students from time to time. The richness of the Indian culture and an exhaustible well of deplorable subjects trigger the curiosity and desire of these foreign students to widen their horizon of knowledge. Since quite some time now, the influx of foreign to India has showed a steady increase. With reputed universities such as Jawaharlal Nehru University, Delhi University, etc. offering some much sought after courses for foreign students, India has raked in on the reputation for being a commendable destination for quality education.

The Indian government, for that matter has also worked on its education policies to enable such foreign students all the facilities and the help that they might require. State education departments and official bodies of various universities have also come forward to offer their succor to these students. Moreover, the surreal atmosphere enshrouding a majority of the colleges acts as an element prodding them to reach out off the ordinary. These international students are expected to satisfy their enquiries regarding matters, such as reservation of seats, fee structure, etc. through the respective universities and colleges.

Indian universities and institutes of higher education and research have been made significant contribution in research and development in the areas ranging from biotechnology to ocean engineering.

In traditional subjects like arts and humanities, pure science, applied physics, chemistry and mathematics, Indian universities and institutes of higher studies have been playing a leading role.

The country has also been active in the development of space technology, production and launching of indigenous satellites and development of peaceful nuclear energy. Besides, India is also recognized the world over for its information technology talent.
